1 Integrating the MultiSafepay plug-in

1.1 Integration requirements

We recommend installing Magento before proceeding with the integration of the MultiSafepay plug-in.

Magento download link:

1.2 Upgrading an existing integration

You'll first have to remove the plug-in manually via FTP when using version 2.0.1 or lower of our plug-in. We also recommend creating a backup before proceeding with the removal of the folders and files.

Checking the plug-in version.

The plug-in version currently in use can be found in the configuration files:

```
/app/code/community/Mage/Msp/etc/config.xml
```

Or

```
/app/code/community/MultiSafepay/Msp/etc/config.xml
```

Removing plug-in version 2.0.0 - 2.2.2

Delete the following directories and files to remove the plug-in:

```
/app/code/community/MultiSafepay/Msp/Block/PaymentFee  
/app/code/community/MultiSafepay/Msp/Model/PaymentFee  
/app/code/community/MultiSafepay/Msp/Model/Observer  
/app/design/adminhtml/default/default/layout/msp_fee.xml  
/app/design/adminhtml/default/default/template/msp/fee.html  
/app/design/adminhtml/default/default/template/msp/paymentfee  
/app/design/frontend/base/default/layout/msp.xml  
/app/design/frontend/base/default/template/msp/paymentFee
```

1.3 A new integration via FTP

- Unzip the content of the plug-in .zip archive to a local folder.
- Place the three folders (app, media and lib) in the root directory via FTP.

1.4 A new integration via Magento Connect

- Unzip the content of the plug-in .zip archive to a local folder.
- Log into the backend of your Magento webshop.
- Go to System → Magento Connect → Magento Connect Manager.
- Choose 'Direct package' file upload.
- Click 'Browse file' and select the file 'MultiSafepay-2.2.X.tgz' from the local folder and click on 'upload'.
- Next; click 'Upload'.

1.5 FastCheckout

We strongly advice removing, or at least restricting, the checkout process in your webshop if you intend on offering FastCheckout as the only available payment method in your webshop.

This should prevent possible confusion and inconvenience among your customers when registering on your website.

The advantage of offering FastCheckout lies in that customers only have to register via MultiSafepay, and that all information is sent back to the shop once the payment has been made.

During future visits to your website, a customer can simply log into their FastCheckout account.

1.6 Notification URL

This will be the notification URL you'll enter into your MultiSafepay account. Replace "example.com" with the Base URL belonging to your webshop.

[/index.php/msp/standard/notification/](#)

Note: Leave out "index.php/" if you have some form of rewrite(s) enabled on your server.

2 Configuring the plug-in

2.1 Connect Settings

The default plug-in settings are listed under “Connect Settings” and be accessed via

System->Configuration->MultiSafepay 2.4.0->Connect Settings

Birthday	Prompt customer for a birthday in FastCheckout
Phonenumber	Prompt customer for a phonenumber in FastCheckout
Chamber of Commerce (CoC/KvK)	Prompt customer for a CoC/KvK in FastCheckout
Passport number	Prompt customer for a passport number in FastCheckout

3 Refunding from the Magento back-end using the refund API

This plug-in supports the MultiSafepay Refund API, and therefore MultiSafepay payments in your MultiSafepay account can be refunded from the Magento back-end. Both partial and full refunds are supported.

Note: Please ensure an API key has been provided under “System”->“Configuration”->“Connect Settings” and that the option “Credit Memo” has been enabled.

The steps below will explain how to refund a payment in your MultiSafepay account from the Magento back-end;

1. Go to the order in the Magento back-end for which you'd like to create a refund.
2. Click the “Invoices” tab on the left of the Order Overview.
3. Open the invoice, and click on “Credit memo” located at the top right of the overview.
4. Once the desired refunds/adjustments have been provided and made, click on the “Refund” or “Refund Online”.

4 Troubleshooting

4.1 Payment methods aren't shown.

We recommend checking the currency settings per payment method/giftcard if they're not visible in the checkoutprocess

4.2 Error 404 while configuring the plug-in.

The following steps should resolve error 404:

1. Navigate to System->Configuration->Connect Settings
2. Click on 'Save Configuration' regardless of whether or not changes have been made to the settings.
3. Log out of the Magento backend.
4. Log back into the Magento backend

4.3 The FastCheckout button isn't shown.

If the FastCheckout button is not visible in the shoppingcart, despite having been configured, then we suggest emptying the Magento caches via *System->Cache Management*.

4.4 The iDEAL banklist isn't shown.

Ensure that "Show iDEAL banklist in checkout" has been enabled under

Settings->Configuration->Connect Gateways->iDEAL

4.5 Error 301 in the Offline Actions overview

If orderstatus aren't updated (correctly) within Magento, then this usually refers to a problem receiving feedback from MultiSafepay.

In the event that (HTTP)301 presents itself as a result in the overview; then it's very likely 'Rewrite URL' has been enabled in Magento or on the server.

In that case removing 'index.php' from the URL should solve this issue.

For your convenience you may copy the Notification URL as shown below by;

to:

4.6 Service Temporarily Unavailable

Sometimes a pre-existing or underlying issue with a Magento site can cause the plug-in integration to fail mid-way.

When this happens, your Magento site may appear to be in maintenance mode causing the message: “503 – Service is unavailable” to show up in the frontend.

To resolve this; Login via FTP and remove or rename the "maintenance.flag" file in the root directory.

4.7 Incorrect taxes are shown in the order when using discount coupons

Ensure that “Apply customer tax” has been set to “Before Discount” under *Sales->Tax->Calc. Settings*

5 Verifying

We recommend verifying the functionality once the plug-in has been installed and configured, which can be achieved quite easily.

The most commonly occurring issue would be the absence of feedback sent from MultiSafepay to your webshop intended to update the status of an order.

The above usually points out to an incorrect Notification URL provided.

This can be verified by having a customer place an order, or by placing a test order yourself, on your website.

It is also highly recommended to perform a test order when using the FastCheckout package.

Log into your MultiSafepay Control Panel:

Take Control over your online payments

E-mail	Email
Secure	Security code
Password	Password

[Sign in to your account](#)

[Forgot your password?](#)

Don't have an account? [Sign up](#)

Once logged in, navigate to the 'Transactions' located in the menu on the left and click on 'Transaction overview'.

Click on the concerning transaction and scroll down to the bottom to see the Offline Actions:

Offline actions							
Created	ID	Action	Status	Result	Last Try	Success	
15-01-2015 09:28:57	10715445	notifyMerchantTrans	success	ok	2015-01-15 09:30:21	2015-01-15 09:30:21	⚡
15-01-2015 09:28:57	10715446	notifyMerchantTrans	success	ok	2015-01-15 09:30:22	2015-01-15 09:30:22	⚡

'success' (Status column) and 'ok' (Result column) indicates that the feedback through the Notification URL is functioning correctly.

We recommend contacting our Support department if the status column indicates “error” and/or the result column contains something other than “ok”.

5 Questions?

Many questions, answers and tips regarding the integration of our plug-ins can be found in our knowledgebase.

Any remaining questions you may have can be sent by e-mail to:
